Case Recap + Recommendation

**Situation:** PS2 has an amazing opportunity to expand its innovative waste management services into China.

**Question:** How should PS2 best capitalize on this opportunity?

**Recommendation:** PS2 should enter China now and seize both the TPS and oil sludge opportunities in a phased implementation plan. Concurrently, PS2 should maintain operations in Canada but should not expand into Ontario.
Why China?
Why China?

- GDP and middle class are rising at an impressive rate
- Chinese government is investing US $3 billion in soil remediation in five years
- Large oil sludge and PCB market
- Opportunity to develop derivative technologies

Declining market growth in Canada
Assumptions

- Chinese government supports venture
- High ratio of oil to coal dependence
- A year from now, NIES is still interested in a TPS demonstration
- No expansion of BEV into PS2’s Western Canadian market
- Negligible natural disaster risk
Phase 1
### Phase 1: First Steps

**Enter into 50:50 joint venture with Nahai**

<table>
<thead>
<tr>
<th>Negotiations</th>
<th>Intellectual Property</th>
<th>Staffing</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Begin JV negotiations for Phase 1 and Phase 2</td>
<td>✓ Obtain 30-year operating license ✓ Apply for Phase 2 patent</td>
<td>✓ Identify internal bilingual employees ✓ Identify bilingual Chinese Canadians for hire (4.3% of population) ✓ Identify bilingual Chinese locals for hire ✓ Develop an HR program for transferring employees</td>
</tr>
<tr>
<td>✓ Begin construction after negotiations</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Phase 1: Porter’s Five Forces

- **Threat of new competition**: High
  - Weak patent laws, early stage of remediation, government relations

- **Threat of substitute products**: Low
  - Already obtained exclusive waste management permit

- **Bargaining power of customers**: Low
  - Superior clean technology that efficiently cleans oil sludge while aligning with Chinese government goals

- **Bargaining power of suppliers**: Low
  - PS2’s clean technology advantage will positively complement Nahai’s waste operations

- **Intensity of competitive rivalry**: Low
  - Have only local waste management permit, developing better technology with help of Nahai

**Recommendation**: Why China?

**Assumptions**: Phase 1

**Phase 2**

**Next Steps**
Phase 2
Phase 2: First Steps

Begin NIES demonstration of TPS technology

**Negotiations + Staffing**
- Negotiations with NIES regarding location of TPS demonstration
- 100% of TPS staff must come from Canada

**Construction**
- Finished patent
- Construct TPS unit

**Mobilization**
- Mobilize TPS unit to demonstration sites
- Negotiate with government about location of additional TPS units
- Supplement demonstration with PS2 promotions
Phase 2: Porter’s Five Forces

Threat of new competition: High
- Weak patent laws, early stage of remediation, government relations

Threat of substitute products: Med
- Thermal Desorption Units (TDUs) in China are not sustainable or environmentally friendly

Bargaining power of customers: Low
- Government will be largely dependent on TPS technology, will have high switching costs to alternatives

Bargaining power of suppliers: Low
- NIES has no close substitutes to TPS, new regulations will make PS2 an important partner

Intensity of competitive rivalry: Low
- Thermal Desorption Units (TDUs) in China will become less favorable, other competitors are showing no signs of clean technology innovation
Project completion: Additional Added Value

- Derivative technology opportunity
- Chinese government relation expertise
- Opportunity to find cheaper ways to implement technology
- Operations services expansion
## Project Completion: Financials before 50:50

*Costs to MI Drilling Fluids Not Split
**Attractive Opportunities**

- More profit
- Advances in technology
- Helping the environment
- Global company

**Need Immediate Attention**

- Begin negotiations
- Get started on Chinese patent now
- Get started on staffing
- Complete JV process
- Acquire license for manufacturing
- Begin oil sludge facility construction

Financials

- 50:50
- Cost Sharing
- Board of Directors
- Profits

- Negotiate Contract for 30 years
- Complete JV Contract
- Acquire license to run manufacturing facility by October 15th, 2010
Appendix: Patent and licensing process

- July 1st, 2010
- Exclusive waste management processing permit in Zhoushan (compensate for not yet having patent)
- Begin Design and Utility Model Patent Process – 18 months

- Begin licensing process immediately for JV with Zhoushan City Industrial and Commerce Administration Board
Appendix: Staffing

PS2 Management

Bilingual Team

Hire new qualified engineers, TPS operators

Locals – Assistant Managers

Administrative
Appendix: Chinese energy consumption

China’s economy drives increase in energy consumption

Economics
Appendix: TPS versus TPU

- Compared with TDU
  TDU → capacity of treating **70 tons of soil a day**
  Mobile TPS unit → capacity for 30,000 tons per year, or **82 tons per day**

- Other advantages
  TPS Mobility → Numerous Small Sites
  TDU Transportation costs
    Soil to TDU
    Desorbed POPs to incineration facility

- Laws / Regulations – Expected to ban import of waste containing POPs from province to province
Appendix: Chinese patent law

Are patents registered in Canada valid in China?
Patents are territorial rights, meaning that a *patent in Canada has no effect in China*. To ensure that your innovations are protected in China, *you will have to ensure you also file for an appropriate patent in China*.

How do I file to protect my patent in China?
In China, patents are administered by the State Intellectual Property Office (SIPO). You can either file directly to SIPO in China, or through the Patent Cooperation Treaty method. In China, patents are granted on a first-to-file basis, which means that all else being equal, the party that files the patent first will obtain the patent. Granting of an invention patent can take 3-4 years, whereas *design and utility model patents can take approximately 18 months*.

Source – The Canadian Trade Commissioner Service
Appendix: JV 50:50 breakdown

“The 50:50 joint venture company will:

• establish a facility capable of processing 10,000 tons/year of oily sludge in Zhoushan with the capacity to expand to 100,000 tons/year;

• explore opportunities of applying the oily sludge treatment technology to other parts of China;

• further define and develop other technologies to complement the oily sludge treatment process;

• provide solutions and consulting services with respect to oil recovery issues; and

• share technical and market information concerning the waste management industry throughout China.”

Appendix: Chinese geography

Geography
Appendix: Chinese economic zones

Geography
Appendix: Typhoon countermeasures

- Buildings fortified against wind and rain
- Fire prevention methods
- Technology already used by Nahai
- Insurance costs

Natural disaster
Appendix: Regulations

- **Stakeholders:**
  - State Energy Commission established in 2002 regulates power sector
  - Energy Ministry
  - National Development and Reform Commission

- **China moving toward a domestic carbon market**
  - New fuel surcharge tax
  - Carbon emissions trading

- **Massive energy demands in China**
  - Risk of energy shortage
  - Expectation of slow liberalization of energy sector
  - 2002 – ASEAN members signed Declaration of Conduct
  - No regulations to prevent China from expanding hydrocarbon development
Appendix: Chinese demand for energy

- Enhanced transmission and distribution capacity
- Coal estimated to provide most of energy by 2030
- 2004 estimate – every 1% GDP increase equal to 1.5% increase in energy demand
- 2009 – China second largest net oil importer behind U.S.
  - 2011 – Net total oil imports reached 5.5 million bbl/d

Total energy consumption in China by type, 2009

- Coal, 70%
- Oil, 19%
- Hydroelectric, 6%
- Natural gas, 4%
- Nuclear, 1%
- Other renewables, 0.3%

Source: U.S. Energy Information Administration, International Statistics
Appendix: Growth opportunities

✅ Oil sludge treatment technology:
  ✅ Merger with a Chinese company unlikely
  ✅ Never acquire an incinerating plant because manufacturing equipment differs greatly with PS2’s equipment

✅ TPS technology
  ✅ Expansion of TPS technology depends on its development
  ✅ Getting go-ahead to move to another province

Financials
