Previous Project Descriptions

2020:
- Performed a vendor rationalization with scorecard and long-tail analysis to manage an efficient supplier base for a global IT solutions provider.
- Ensured sustainable practices from the production of raw materials through finished project by creating transparent supply chain tool for an apparel manufacturer.
- Optimized inventory management system for a global logistics provider.
- Created a simplified forecast modeling tool for min/max stocking for a public utility.
- Developed a strategic supplier rationalization plan for a global technology company.
- Optimized 3PL carrier network for a pet food manufacturer.
- Created value stream maps for a surgical instrument manufacturer to improve inventory management processes.
- Improved forecasting of supply and demand of air and ocean freight service for a multinational 3PL provider.

What Makes a Good Project?

The project should be of value to you and your organization. If nothing comes immediately to mind, you might consider issues or challenges on the back burner because you have not had the time or resources to address them. Take a look at the functional areas and topics listed below to get some ideas. We would be glad to talk with you about your possible projects. In the meantime, this information will provide further guidance.

Required:
- Strong support from company management
- Sponsor available for weekly check-in
- Can be completed in the eight weeks allotted
- Requires no more than four site visits
- Sponsor company can readily provide access to data and other resources
- Deliverables include actionable recommendations

Fits into one or more of these subject areas:
- Strategy: Supply chain audit, mapping and benchmarking; global network design
- Planning: Forecasting and demand planning, capacity analysis, sales & operations planning
- Distribution: Inventory optimization, warehouse location and efficiency, omnichannel management, transportation and logistics decisions
- Manufacturing and Service: Production planning, service systems design, wait-time analysis, staffing plans
- Sourcing: Make vs. buy analysis, supplier selection process, auctions, scorecards, contracts, CSR benchmarking, procurement
- Process Improvement: Lean and Six Sigma, reengineering, decision support systems, spreadsheet modeling, software selection, project planning, collaborative processes, carbon footprint reduction

Sponsor Time Commitment:
Depending on the scope and nature of the project, you should plan on an hour per week minimum once the project is underway. More time will be required at the beginning to get the scope settled and host a site visit.

Even better if:
- It has large, readily-available, data sets
- It’s suitable for Six Sigma problem solving methodologies
- There is a strong likelihood that at least some recommendations will be implemented
